

Curvaceous Software Ltd. appoints Cayuga Partners as a new North American Agent

Increasing their presence in North America, Curvaceous continues to expand its presence around the globe as the economic and environmental benefits of Geometric Process Control (GPC) technology become readily apparent to all.

Dr. Robin Brooks, Managing Director of Curvaceous is enthusiastic about this new alliance;

"Cayuga Partners pride themselves on providing a market leading innovation, their *Supply Chain Innovation Program*™. On a quest to lead manufacturers to the next level of sustained performance Cayuga's approach is complimented by our technology of Geometric Process Control (GPC) which will deliver the desired results and much more."

GPC is currently being used by over seventy major process companies throughout the UK, Europe and North America. Results such as a 2% improvement in process efficiency after using the tools for three weeks have been observed.

Walt Beadling, Managing Partner of Cayuga Partners, is looking forward to working with Curvaceous;

"The Curvaceous technology will enable us to bring many more benefits to our existing customers and new clients. Its unique ability to visualize, analyze and optimize processes from end to end is strikingly simple and provides a new understanding of operations and consequently how to improve them. We are especially excited about its potential for supply chain management and optimization."

Cayuga Partners uses a combination of Consultancy, Education and Software Tools to enable manufacturers to improve supply chain responsiveness and efficiency.
